Circular scraper Tecno Classic

The Circular scrapers Tecno classic are made from stainless steel, which ensures the absence of corrosion and longer durability.

- Shovels that are adjustable as much in height as they are in degrees of inclination.
- An inferior rubber for the collection of EPDM.
- A Tecno Classic scraper adapts itself to the imperfections of manual labor since it is completely adjustable.

Specialists on lamellar settling

Circular Scraper Tecno Classic

The Tecno Classic system for a lamellar decanter with a diameter of 11 meters.

The Tecno Classic models are made in order to offer the best yield with the greatest guarantee of operation. The reducers are dimensioned from the diameters of the decanters and the concentration of mud.

We have our own team of fitters to guarantee the proper assembly and to activate the system.

A traction system with a central axle, which is anchored to the bridge, permits the inferior shovels, which carry out the collection of the inferior sludge, to work.

OPTIONAL EQUIPMENT:

- A pair of limiters.
- Electric board.
- Frequency adjusters.
- Possibility to control the system telematically.

The development of the BTEC models is based on the constant innovation and the use of new components to offer the best performance qualities in our equipments.
